

Software Installation Guide for Cells Calculator V3

1. Copy the contents of this folder to your working directory, for example:
C:\Work\CellsDetectorV3.
2. Make sure the folder **packages** contains the installer file **Miniconda3-latest-Windows-x86_64.exe**.
If it is missing, download it from <https://www.anaconda.com/download>.
Note: authorization is required.
3. Make sure the folder **trainedmodels** contains the model files.
If not — download the model archive from
<https://1drv.ms/f/c/e18062ed90005113/E1DioqwHEiNMk4Jf7OEYtOgBPLNXRzHiAHajImtGeq2nPA?e=8Y85u1>
(also listed in the file **models.readme**) and copy the extracted models to the **trainedmodels** folder.
The current model archive is named **Cells-calculator-v3-models.zip**.
4. Run **install.bat** as Administrator to install Miniconda, set up the Python environment, and download all required packages.
5. Launch the application by running **runme.bat** in your working directory.
Perform the first launch as Administrator to allow the download of standard models.
6. Test the application in the “**All models on current image**” mode.
The standard models will be loaded during the first launch.
